FLASHCUT 26B ALL-IN-ONE

皮料收集系統 SEQUENTIAL ACQUISITION

連續分段式皮料接收系統，皮料大小可以大於接收區的面積，而且是分步接收，操作人員可以很方便的檢驗皮革的質量。此外，此皮料收集系統可縮短工作時間，針對已檢驗過的皮料進行排版。

Sequential steps acquisition system allows the acquisition of hides bigger than the acquisition area, but above all, processing hides step-by-step, it eases hides inspection, by approaching the area to be inspected to the operator. Moreover, it optimises the processing time, allowing to nest the shapes over the parts already examined.

電子筆 FLASH TRACER OPTICAL PEN

電子筆可以很容易地標記皮料的瑕疵和品質區域，並且適當的用不同的顏色直接顯示在屏幕和皮料上。此外，電子筆如同鼠標功能，能夠啟動排版和切割操作，並且直接在工作區域修改參數。

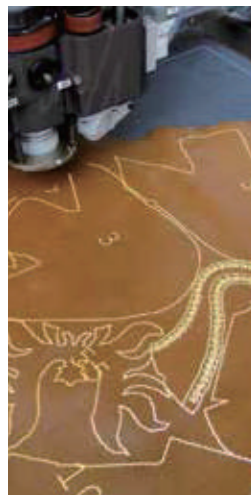

It allows to easily mark defects and quality areas of the hides, and to display them both on the screen and directly on the hide, each one with a proper colour. Moreover, Flash Tracer operates as a mouse, able to launch nesting and cutting operations and to modify parameters directly on the working area.

分區真空吸附系統 PARTITIONED VACUUM SYSTEM

可調整式分區真空吸附系統功能強大，適用於各種類型的材料，在切割過程中能透過區塊式控制（皮革系統：最小控制區塊為10cmx10cm），有效固定材料並節省能源。

Powerful. Partitioned adjustable vacuum system, to be adapted to any type of material or job and concentrated where needed. For leather cutting, the minimum control area is 10cm*10cm that allows the best fixing during cutting and the highest energy saving at same time.

優化的排版系統 OPTIMIZED NESTING

專為自動排版設計之系統及其友善的操作介面，能有效縮短排版的時間與節省材料。

Customized systems for automatic nesting and friendly interface dramatically reduce the overall time for placing the shapes to be processed and optimize the material yield.

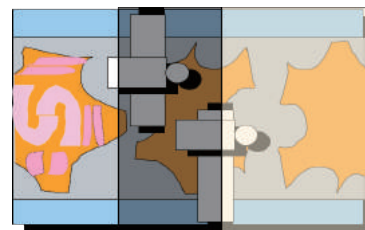

大寬幅的工作區域 WIDE WORKING AREA

大寬幅的收料、排版和切割台面以及傳送帶式輸送系統，可以處理並切割小皮料及大皮料，全皮最大可達整個工作台的寬度。

Wide acquisition, nesting and cutting surface and conveyORIZED transportation system allow to process and cut from the biggest full-hides to the smallest ones acquired simultaneously along the entire width of the table.
